SEWER & AC WATER GROUP JOB 834

Background

This project is part of the City of San Diego's ongoing program as mandated by the California Department of Public Health (DPH) to replace all aging and deteriorated cast-iron water mains and vitrified clay sewer mains. By replacing these mains, which were installed in the early 1950's or prior, the City will not only meet the DPH mandates but will also bring these mains up to current City standards and prevent water main breaks and sewer stoppages in the area.

Project Overview

The construction of this Sewer & AC Water Main Replacement Project (Group Job 834) is located in the various Planning Communities. This project will replace and realign approximately 8,996 linear feet (1.70 miles) of existing Concrete & Vitrified Clay sewer mains and approximately 5,757 linear feet (1.09 miles) of cast iron water mains. New curb ramps will be constructed where needed, and the impacted streets will be resurfaced (AC overlay and/or slurry sealed).

This project will improve water and sewer services to the community, create a more reliable water and sewer system and reduce future maintenance cost.

Project Area

The limits of construction activities for Sewer & AC Water Group Job 834 are shown on the location map for Kensington-Talmadge Planning Group with the following affected Alleys: Alleys between El Cajon & Monroe Ave (btwn Central Ave & 42nd Street) Alleys between Orange Ave & El Cajon Blvd. (btwn Marlborough Ave & Copeland Ave).

Coordination

The City of San Diego will notify the residents by mail within thirty (30) days prior the start of construction and the contractor will notify residents by door hanger ten (10) days before start of construction in their block.

Traffic & Safety

The City of San Diego has developed and will implement traffic control plans by requiring the contractor to submit shop drawings during construction to ensure accessibility, minimize disruption and protect the safety of the residents within the project area. Also, the Contractor will be directed at all times to keep the area as clean as possible from dirt and dust.

Construction Schedule

The estimated construction start date is in April 2016 with a total duration of 270 working days.

Cost

The estimated total construction cost for Sewer & AC Water Group Job 834 is approximately \$4,700,000.00

Additional Information

Additional information about this project, contact: **Project Engineer Jenny Jarrell at (619) 533-5224**. Other important infrastructure projects can be found online at www.sandiego.gov/engineering-cip, or by calling the public information line at **(619) 533-4207**.
